## Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in the application:

## Listing of Claims:

## 1-42. (Canceled)

- 43. (Original) A liquid crystal display device comprising:
- a first substrate and a second substrate opposed to the first substrate;
- a thin film transistor formed over the first substrate; and
- a liquid crystal interposed between the first substrate and the second substrate,
- wherein the liquid crystal is driven by applying an electric field substantially in parallel with a surface of the first substrate, and
  - wherein a transparent conductive material is formed over the second substrate.
- 44. (Original) A liquid crystal display device according to claim 43 wherein the first and the second substrates comprise a glass or a quartz substrate.
- 45. (Original) A liquid crystal display device according to claim 43 wherein the thin film transistor comprises an amorphous silicon.
- 46. (Original) A liquid crystal display device according to claim 43 wherein the transparent conductive material functions as an electrode.
  - 47. (Original) A liquid crystal display device comprising:
  - a first substrate and a second substrate opposed to the first substrate;
  - a thin film transistor formed over the first substrate; and

a liquid crystal interposed between the first substrate and the second substrate, wherein the liquid crystal is driven by applying an electric field substantially in parallel with a surface of the first substrate, and

wherein a transparent conductive material is formed over an entire surface of the second substrate.

- 48. (Original) A liquid crystal display device according to claim 47 wherein the first and the second substrates comprise a glass or a quartz substrate.
- 49. (Original) A liquid crystal display device according to claim 47 wherein the thin film transistor comprises an amorphous silicon.
- 50. (Original) A liquid crystal display device according to claim 47 wherein the transparent conductive material functions as an electrode.
  - 51. (Original) A liquid crystal display device comprising:
  - a first substrate and a second substrate opposed to the first substrate;
  - a thin film transistor formed over the first substrate; and
  - a liquid crystal interposed between the first substrate and the second substrate,

wherein the liquid crystal is driven by applying an electric field substantially in parallel with a surface of the first substrate, and

wherein a transparent conductive material comprising ITO is formed over the second substrate.

52. (Original) A liquid crystal display device according to claim 51 wherein the first and the second substrates comprise a glass or a quartz substrate.

Attorney's Docket No.: 07977-Applicant: Shunpei Yamazaki et al. 106004 / US3197D1D1D1

Serial No.: 10/807,273 Filed : March 24, 2004 Page : 4 of 10

53. (Original) A liquid crystal display device according to claim 51 wherein the thin film transistor comprises an amorphous silicon.

- 54. (Original) A liquid crystal display device according to claim 51 wherein the transparent conductive material functions as an electrode.
  - 55. (Original) A liquid crystal display device comprising:
  - a first substrate and a second substrate opposed to the first substrate;
  - a thin film transistor formed over the first substrate; and
  - a liquid crystal interposed between the first substrate and the second substrate,

wherein the liquid crystal is driven by applying an electric field substantially in parallel with a surface of the first substrate, and

wherein a transparent conductive material comprising ITO is formed over an entire surface of the second substrate.

- 56. (Original) A liquid crystal display device according to claim 55 wherein the first and the second substrates comprise a glass or a quartz substrate.
- 57. (Original) A liquid crystal display device according to claim 55 wherein the thin film transistor comprises an amorphous silicon.
- 58. (Original) A liquid crystal display device according to claim 55 wherein the transparent conductive material functions as an electrode.
  - 59. (New) A liquid crystal display device comprising:
  - a first substrate and a second substrate opposed to the first substrate;
  - a thin film transistor formed over the first substrate; and
  - a liquid crystal interposed between the first substrate and the second substrate,

Applicant : Shunpei Yamazaki et al. Attorney's Docket No.: 07977-Serial No.: 10/807.273 106004 / US3197D1D1D1

Serial No.: 10/807,273 Filed: March 24, 2004

wherein the liquid crystal is driven by applying an electric field substantially in parallel with a surface of the first substrate,

wherein a transparent conductive material is formed over the second substrate, and wherein a black matrix comprising a resin material is formed adjacent to the second substrate.

- 60. (New) A liquid crystal display device according to claim 59 wherein the first and the second substrates comprise a glass or a quartz substrate.
- 61. (New) A liquid crystal display device according to claim 59 wherein the thin film transistor comprises an amorphous silicon.
- 62. (New) A liquid crystal display device according to claim 59 wherein the transparent conductive material functions as an electrode.
- 63. (New) A liquid crystal display device according to claim 59 wherein the black matrix contains a black pigment.
  - 64. (New) A liquid crystal display device comprising:
  - a first substrate and a second substrate opposed to the first substrate;
  - a thin film transistor formed over the first substrate; and
  - a liquid crystal interposed between the first substrate and the second substrate,
- wherein the liquid crystal is driven by applying an electric field substantially in parallel with a surface of the first substrate,

wherein a transparent conductive material is formed over an entire surface of the second substrate, and

wherein a black matrix comprising a resin material is formed adjacent to the second substrate.

65. (New) A liquid crystal display device according to claim 64 wherein the first and the second substrates comprise a glass or a quartz substrate.

- 66. (New) A liquid crystal display device according to claim 64 wherein the thin film transistor comprises an amorphous silicon.
- 67. (New) A liquid crystal display device according to claim 64 wherein the transparent conductive material functions as an electrode.
- 68. (New) A liquid crystal display device according to claim 64 wherein the black matrix contains a black pigment.
  - 69. (New) A liquid crystal display device comprising:
  - a first substrate and a second substrate opposed to the first substrate;
  - a thin film transistor formed over the first substrate; and
  - a liquid crystal interposed between the first substrate and the second substrate,

wherein the liquid crystal is driven by applying an electric field substantially in parallel with a surface of the first substrate,

wherein a transparent conductive material comprising ITO is formed over the second substrate, and

wherein a black matrix comprising a resin material is formed adjacent to the second substrate.

70. (New) A liquid crystal display device according to claim 69 wherein the first and the second substrates comprise a glass or a quartz substrate.

71. (New) A liquid crystal display device according to claim 69 wherein the thin film transistor comprises an amorphous silicon.

- 72. (New) A liquid crystal display device according to claim 69 wherein the transparent conductive material functions as an electrode.
- 73. (New) A liquid crystal display device according to claim 69 wherein the black matrix contains a black pigment.
  - 74. (New) A liquid crystal display device comprising:
  - a first substrate and a second substrate opposed to the first substrate;
  - a thin film transistor formed over the first substrate; and
  - a liquid crystal interposed between the first substrate and the second substrate,

wherein the liquid crystal is driven by applying an electric field substantially in parallel with a surface of the first substrate,

wherein a transparent conductive material comprising ITO is formed over an entire surface of the second substrate, and

wherein a black matrix comprising a resin material is formed adjacent to the second substrate.

- 75. (New) A liquid crystal display device according to claim 74 wherein the first and the second substrates comprise a glass or a quartz substrate.
- 76. (New) A liquid crystal display device according to claim 74 wherein the thin film transistor comprises an amorphous silicon.
- 77. (New) A liquid crystal display device according to claim 74 wherein the transparent conductive material functions as an electrode.
